

The file format required for printing is PDF, with suitably selected parameters for offset printing and further postpress assumptions. Our technological specifications are intended to guide you through the essential stages in correctly placing a production order.

General information:

Box dimensions AxBxH Bleed 2 mm. Choice of dispersion varnish if required for protection

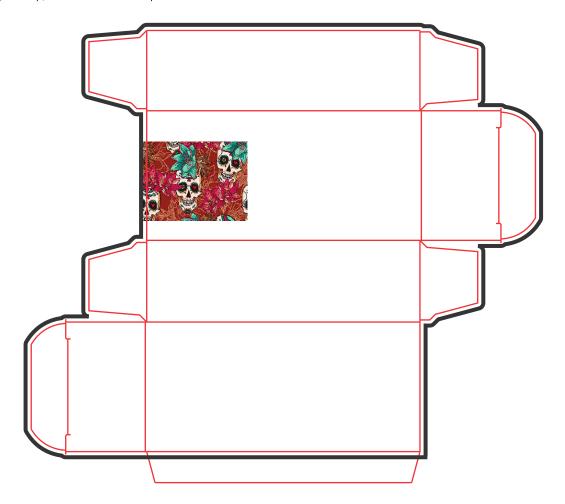

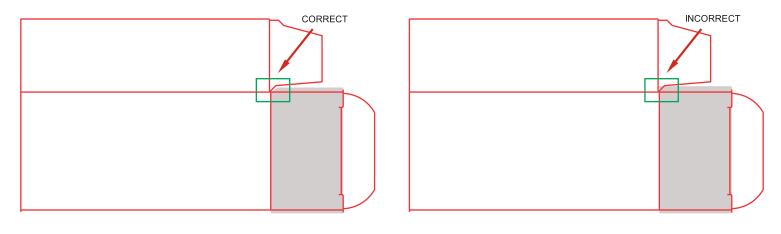

Developed by Drukamia Erbi

Graphics: 300 dpi bitmap, CMYK without colour profiles added

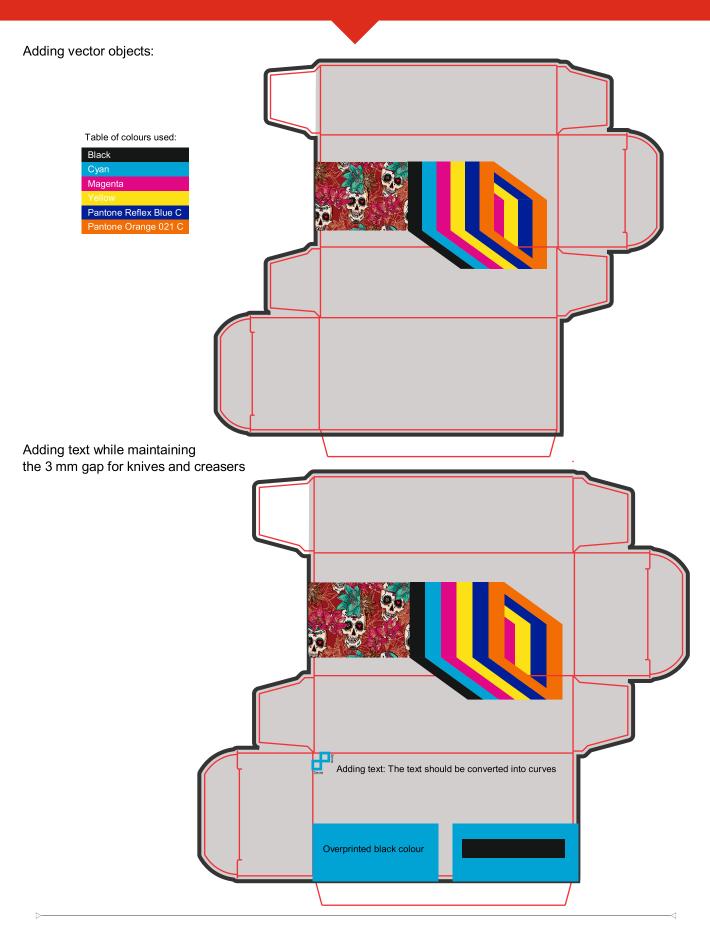

Aesthetics for the box flaps and panels: Graphics and other objects should not overlap the neighbouring flaps or panels.

Developed by Drukarnia Erbi

Braille embossing:

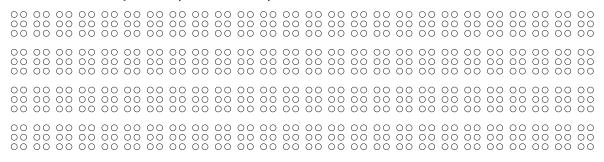

Braille with an overprinted spot colour

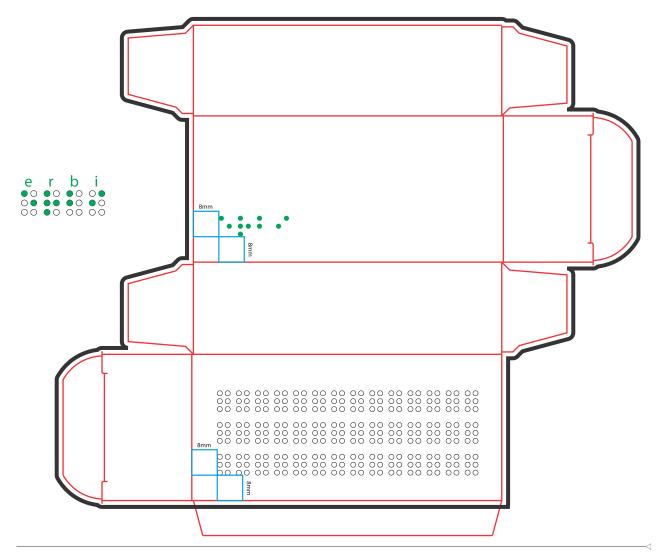

(CAUTION – do not convert or scale the Braille embossing once the template includes it)

Medium Marburg Braille prepared with another overprinted spot colour, at most 4 lines with up to 26 letters, parallel to the glue flap, on no more than two box panels.

Perpendicular to the glue flap and proportional to the panel size, while maintaining the 8 mm gap from the punching and creasing edges.

Maximum template (scale 1/1):

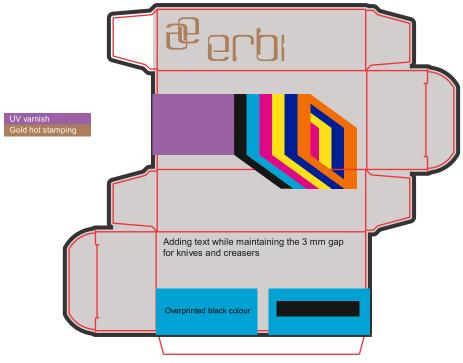

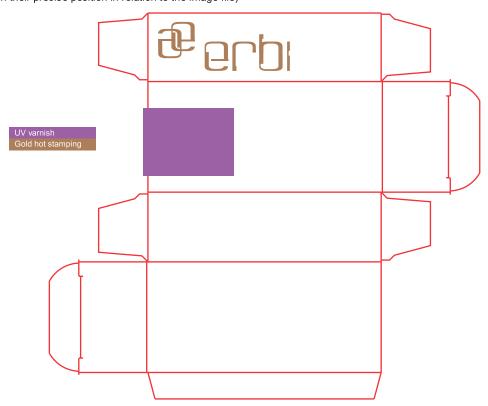

Quality improvement:

UV varnish of vector objects overprinted with a spot colour. Hot stamping with selected vector objects plus trapping.

Additional PDF file or page with the improvements only. (CAUTION – maintain their precise position in relation to the image file)
